Driver Installation

On Windows device open **Device Manager**.

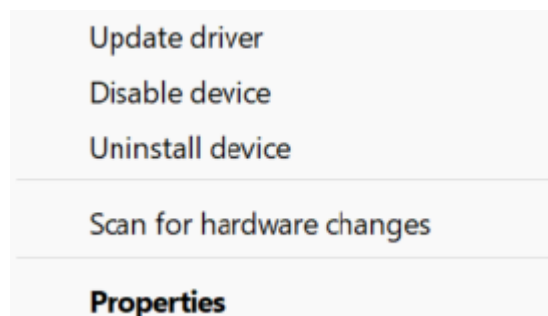

If the driver is installed, one port should be named Silicon Labs CP210x USB to UART Bridge in the **Ports (COM & LPT)** drop-down list, as shown in the picture below.

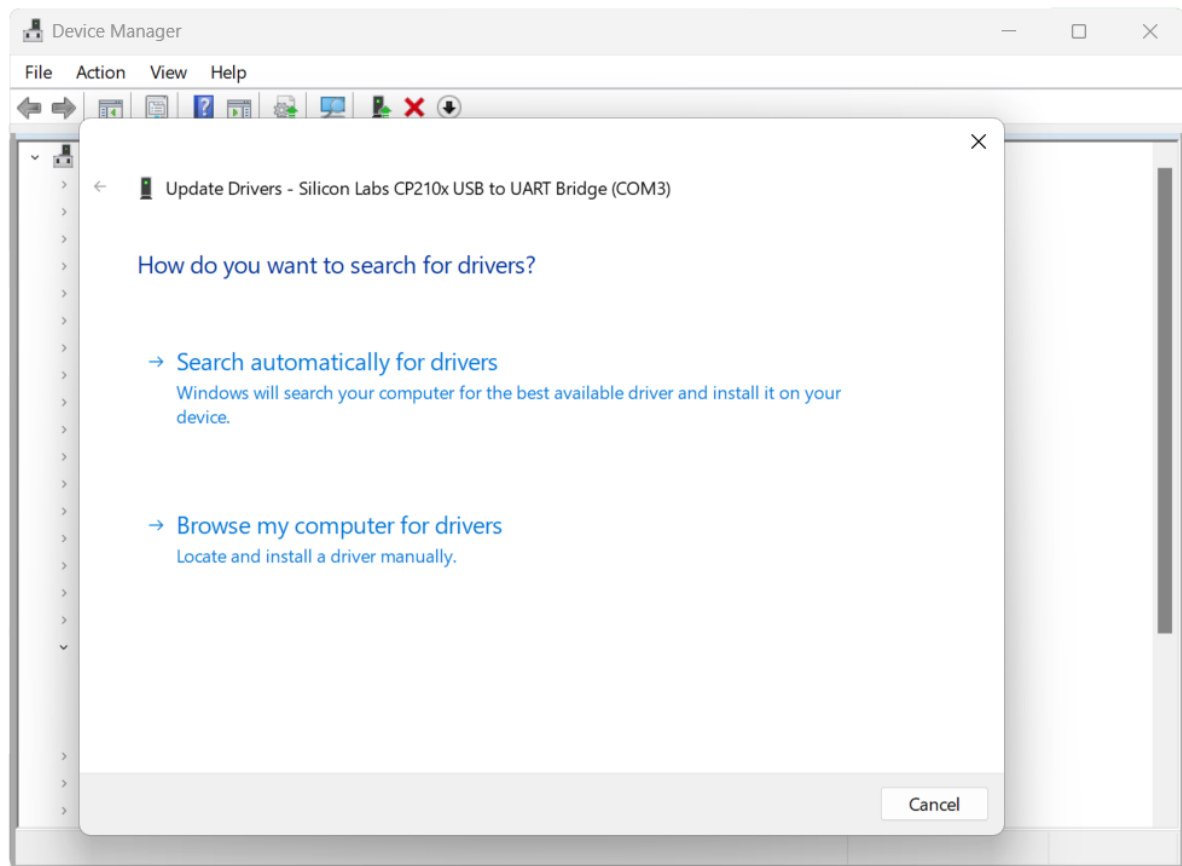

If the driver is not installed, one of the ports should appear with a yellow warning triangle next to it in the **Other devices** drop-down list:

Right-click on this port and select **Update driver**.

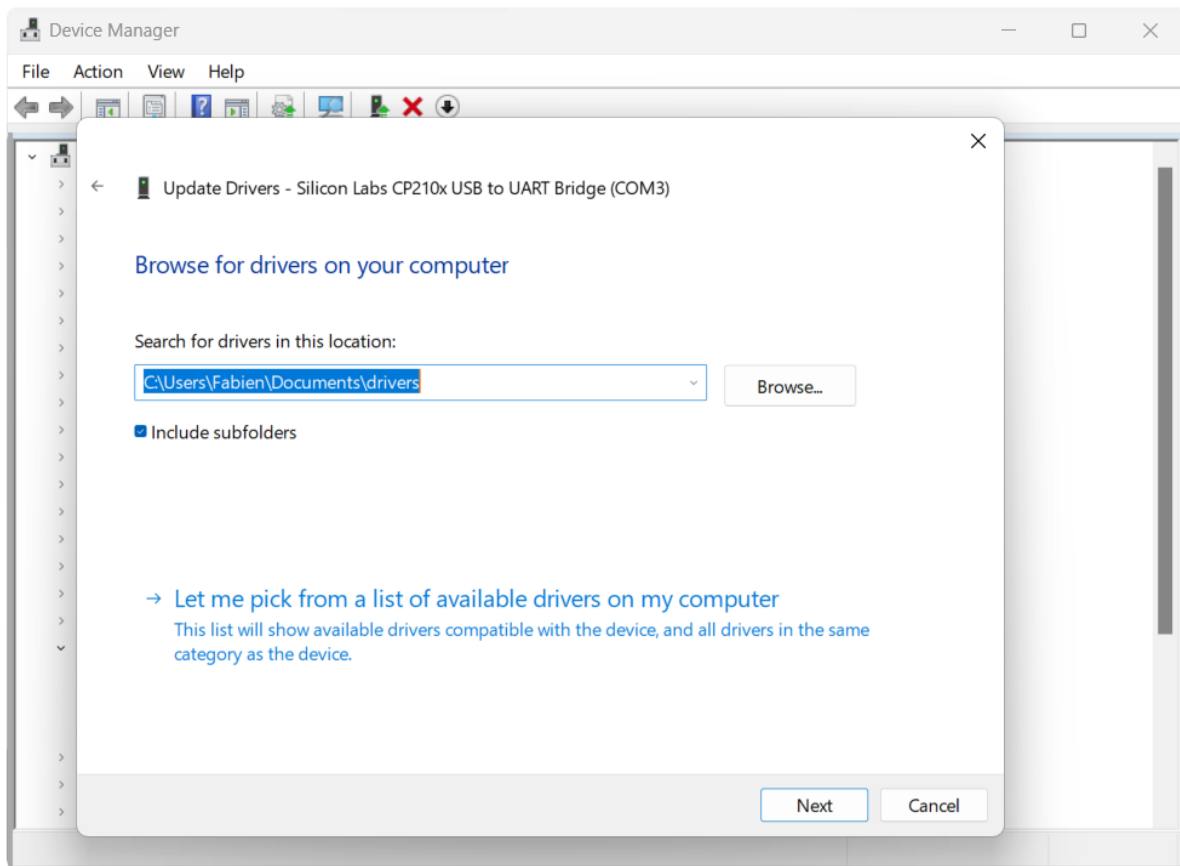

The following window should appear:

Select **Browse my computer for drivers**, then **Browse** on the following window:

Search for the **CP210x_Universal_Windows_Driver** folder on your device then click on **Next** then **Close**.

The driver should be installed and the **Silicon Labs CP210x USB to UART Bridge** port should appear in the Device Manager as shown below.
